

Set up home Connect in Home assistant

go to [Homepage | Home Connect Developer Program \(home-connect.com\)](https://home-connect.com)

and sign up for a account or sign in your account.

Go to Applications and click on register Application and save it.

See picture for information.

The screenshot shows the 'Your Applications' page of the Home Connect Developer Program. The page has a blue header with the Home Connect logo and navigation links: Home, How It Works, Docs, Applications (selected), Simulators, News & Updates, Integrations, and Help & Support. A blue button labeled 'Home Connect Developer Program' is in the top right. Below the header, the title 'Your Applications' is centered, followed by a subtitle: 'Here you can register new applications, start testing on a real appliance and submit your application for publication.' A blue bar contains the tabs 'Your Applications' and 'Register Application' (selected). The 'Register Application' form includes the following fields and options:

- Application ID \***: A text input field with the placeholder 'name of the application'. A note below states: 'The application ID is the internal name of the application.'
- OAuth Flow \***: A dropdown menu with 'Authorization Code Grant Flow' selected. A note below states: 'Please select the OAuth Flow you want to use with your application. This can **not** be changed afterwards.'
- Home Connect User Account for Testing**: A text input field with the placeholder 'not the developer account but the registration from homeconnect app'. A note below states: 'The specified Home Connect user account can be used with this application during the development phase. Leave blank to use the Home Connect user account defined in [your profile](#).'
- Redirect URI \***: A text input field with the placeholder 'http://IPaddress\_of\_home\_assistant/oauth/external/callback'. A note below states: 'Please provide a valid redirect URI for the OAuth process, e.g. <https://example.com>'.
- ☐ **Add additional redirect URIs**
- One Time Token**:
  - ☐ **Enable One Time Token Mode**
  - A note below states: 'A refresh token can be only used once. In case of a second usage, all created access and refresh tokens are revoked.'
- Save**: A blue button at the bottom of the form.

Go to your application and copy the client ID and Client Secret.

## Your Applications

Here you can register new applications, start testing on a real appliance and submit your application for publication.

Access

Private

Private access is limited to a single Home Connect user account as defined.

Home Connect user account for testing

Add more >

This Home Connect user account has been configured in your profile. You can override it for this application.

OAuth Flow

Authorization Code Grant Flow

Client ID

Client Secret (required)

Redirect URIs

One Time Token Mode Disabled

Proof Key for Code Exchange Disabled

Edit Application

Delete Application

Then go to the configuration.yaml of home assistant

type home\_connect: <enter>

client id: (paste the client id of youre application)

client secret( paste the secret id of youre application

and save it en reboot your home assistant system

```
38
39 home_connect:
40   client_id:
41   client_secret:
42
43
```

then add a new intergration and search for home connect and add that configuration.

then you have the login again.
